

Exploring Stream Monitoring: An Introduction

Wed., Jan. 16, 2013, 7pm
Snow date: Jan. 22, 7pm

Location: Boyce Fire Hall

Event Details:
pecva.org/events

Do you like to explore in nature and discover the world around you?

Stream monitoring may be for you!

Stream-dwellers give us clues to the health of our local environment.

Classroom Training:

Tues. Feb. 12, 2013, 7pm
Snow date: Feb. 20, 7pm
Location: Boyce Fire Hall

Streamside Training & Certification dates TBA

A fun, new volunteer opportunity in Clarke:

This introductory session kicks off a new program to collect information about the benthic macroinvertebrates (small creatures that live on streambeds) in Clarke County streams. It will add to the valuable chemical data that the Friends of the Shenandoah River volunteers have been collecting for a long time.

Explore biological stream monitoring and learn what volunteering involves.

For a couple of hours at a time, 3 or 4 times a year, here's some of what you'll discover as a monitor:

- The variety of stream-dwellers that live where you monitor
- Information about the health of the stream and surrounding lands
- Stream habitats and survival strategies
- Pollution-sensitivity
- For an online introduction: vasos.org/virtual-training.html
